Subject: Re: Instrumentation for upcoming CRU and HTC Assessments

Eric,
Thanks for getting this all setup! One thing I wanted to confirm was that the Ludlum 2241 is coming along with a longer connection cable. As I believe you know, we are advancing borings at CRU and are being requested to screen the boring down to a maximum depth of 8 feet bgs. We will need a cable 10 feet or so to be able to accomplish that task.

Thanks,

Tim

Good Afternoon:

I think we have a game plan as far as the instruments for the upcoming assessments at CRU and HTC.

Monday, March 28th, ERT will transport the equipment listed below to Edison.
Two (2) Ludlum 2241, Model 44-10 (2"x2" NaI probe), GPS, Viper units
Two (2) RSS-131 HPIC

We have two buggies and the other communication equipment in Edison to go along with the ERT equipment. Therefore, we do not have to rent the equipment for either site assessment.

I will be in Monday and Tuesday to confirm receipt with ERT personnel. We are hoping to coordinate a get together in the Edison Equipment Room on Wednesday, March 30th at 10:00AM. We can adjust the time if necessary. I will be out of the office on Wed but Dan Gaughan and Mike Hoppe should be available. We are requesting that Frank Campbell and any other available Weston Personnel that works on the rad sites attend. The purpose is to ensure all equipment is working properly for the upcoming assessments starting with CRU the week of April 4th.

Thanks

Regards,

Eric
